Professional Summary

Staff Software Engineer with experience designing cloud-native platforms, distributed systems, workflow automation, and multi-tenant SaaS. Combines deep expertise in scalable backend architectures with knowledge of modern AI technologies, bridging robust distributed systems with emerging RAG and agentic workflows. Track record of evaluating technologies and building reusable platform capabilities that enable engineering teams to build, deploy, and operate applications at scale. Deep expertise in Java, Python, Spring Boot, Azure (Certified), Kubernetes, distributed systems, and observability, with knowledge of the LangChain ecosystem, RAG, and agentic workflows.

Core Competencies

Architecture & Platforms: Distributed Systems, Cloud-Native SaaS, Event-Driven Architecture, Microservices, Workflow Platforms, Developer Platforms

Backend & Observability: Java, Spring Boot, REST APIs, GraphQL, Python, Flowable, OpenTelemetry, ELK Stack, Prometheus, Grafana

Cloud & Infrastructure: Microsoft Azure, Kubernetes, Docker, Azure Storage/Event Hubs/Functions, CI/CD, Infrastructure Automation

Data & Messaging: Apache Kafka, RabbitMQ, SQL Server, PostgreSQL, MongoDB

Leadership & Governance: Technical Leadership, Mentorship, Engineering Governance

Professional Experience

Blue Yonder

Staff Software Engineer

Hyderabad, India

Mar 2021 – Present

- Led the technology evaluation and architected a cloud-native workflow platform using Flowable, enabling 20+ engineering teams to rapidly design, deploy, version, and execute enterprise workflows, reducing feature time-to-market by 40%.
- Designed a secure, multi-tenant execution framework with tenant isolation, authentication, and governance controls to support enterprise SaaS workflow orchestration.
- Engineered reusable platform services and integrations (including Azure Storage and REST APIs), simplifying self-service workflow development and integration across multiple teams.
- Established engineering guardrails through workflow validation, secure scripting, and static analysis, ensuring reliable and secure execution of customer-authored code.
- Architected platform observability using OpenTelemetry, ELK, and Prometheus, providing end-to-end execution visibility and reducing mean-time-to-detection (MTTD) and system diagnostic times by 45%.
- Optimized platform scalability and performance tuning for database and asynchronous workloads, improving database query throughput by 35% and ensuring 99.99% operational reliability under peak traffic.
- Standardized developer workflows and patterns across product teams, reducing workflow onboarding setup times by 50% and driving continuous platform strategy.

Deloitte
Senior Software Engineer

Hyderabad, India
Feb 2015 – Mar 2021

- Architected an automated inventory replenishment platform that transformed demand forecasting into an event-driven workflow, reducing stock shortages by 20% while improving inventory availability and sales performance.
- Designed and developed a subscription management platform using Spring Boot and RabbitMQ, enabling asynchronous order processing, scalable event-driven communication, and a 15% increase in recurring order volume.
- Collaborated with architects, product owners, and cross-functional engineering teams to translate complex business requirements into scalable technical solutions while driving architecture discussions and engineering best practices.
- Mentored junior engineers on software design principles, code quality, and architectural best practices, improving engineering productivity and promoting consistent development standards across the team.

Infosys
Software Engineer

Hyderabad, India
Oct 2011 – Jan 2015

- Developed reusable commerce capabilities on SAP Commerce (Hybris), enabling configurable product catalog, product bundling, and order management features for large-scale B2C retail platforms.

Education & Certifications

Georgia Institute of Technology
M.S. in Computer Science (Specialization: AI, Part-time)

Online
2025 – Present

JNTU
B.Tech in Computer Science (First Class with Distinction)

Hyderabad, India
March 2011

Certifications:

Cornell (Machine Learning, NLP with Python)
Microsoft (Azure Developer and Administrator)

2022
2024
